

New International School

The ethos of English education is now a much sought after commodity for international schools. In 2003, BH&M were asked to be the design architects for the second school abroad to be sponsored by Dulwich College.

Dulwich College, Shanghai, is a 3+ to 17+ mixed school which was constructed in the Jin Qiao development zone east of Shanghai, China. It was built in locally sourced materials but in the English style of brick and pitched roof, along with a clock tower reflecting the original Charles Barry (Jr) construction of Dulwich College itself (left). It provides a traditional English curriculum education for both English speaking expatriates and Chinese, and the building contains all facilities associated with independent education. The rugby pitch, sited in front of the School, is a happy coincidence as it already existed as the expatriate English Rugby Club and forms part of the playing fields available to the School.
